Habitats & Ecosystems Vocabulary

Key terms and definitions for our current science unit, organized as a study-friendly reference sheet.

Key vocabulary from our current habitats & ecosystems unit. Reviewing these terms at home — and finding real-life examples together — really helps them stick.

Habitat	The natural place where a living thing makes its home — provides food, water, shelter, and space.
Ecosystem	A community of living things (plants, animals) interacting with the non-living parts of their environment (water, soil, air).
Adaptation	A special feature or behaviour that helps a living thing survive in its habitat.
Food Chain	The path that shows how energy moves from one living thing to another, starting with the sun.
Producer	A living thing (usually a plant) that makes its own food using sunlight.
Consumer	A living thing that eats other living things for energy (herbivore, carnivore, omnivore).
Decomposer	A living thing that breaks down dead plants and animals, returning nutrients to the soil.
Biodiversity	The variety of different living things found in a habitat or ecosystem.
Population	All the members of one species living in the same area.
Community	All the different populations living and interacting together in one area.
